Brady St. Pierre

Flight Metrics

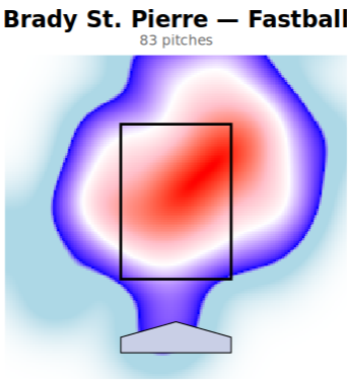

Arsenal			Velocity		Flight Characteristics			Pitching Motion			Stuff+
Pitch Type	Usage	Pitches	Avg Velo	Max Velo	IVB	HB	Spin Rate	Ext	Rel Ht.	Rel Side	Stuff+
4FB	48.0%	83	90.6	93.4	21.5	9.8	2428	5.6	6.2	0.1	109
SL	45.6%	79	82.4	85.9	-0.7	-3.8	2577	5.1	6.2	0.2	113
CH	6.4%	11	84.5	87.8	7.8	11.3	1699	5.2	5.9	0.6	101

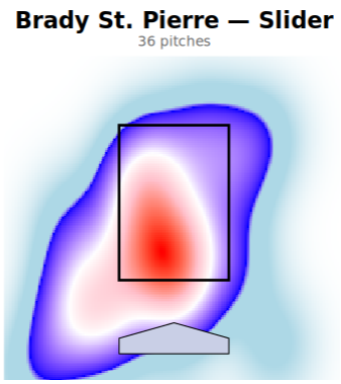

- High IVB (22”) (97th percentile), riding fastball that performs best with elevated locations. Over-the-top arm slot gives more ride effect to the fastball.
- Gyro-slider shape with a high spin rate is his most effective pitch (113 Stuff+) (95th percentile), and it tunnels well with his fastball based on the release profile.
- Changeup is a rarely used third pitch that is only used against LHBs.

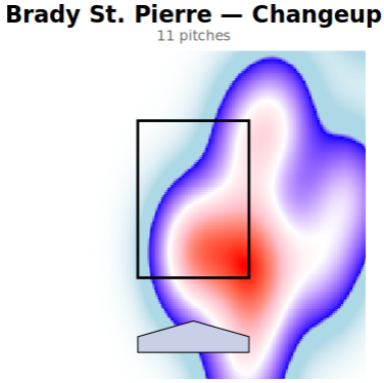

Overall Effectiveness

Arsenal		Locations		Swing and Miss			Ball In Play			
Pitch Type	Usage	Zone%	Chase%	Whiff%	CSW%	IZW%	BIP	Avg EV	EV90	xwOBA
4FB	48.0%	41.0%	32.7%	24.3%	27.7%	23.8%	14	75.2	99.0	.305
SL	45.6%	40.4%	30.7%	35.8%	25.5%	21.3%	12	78.9	95.9	.265
CH	6.4%	36.4%	28.6%	33.3%	18.2%	50.0%	1	65.9	74.2	.041
Overall	100%	40.5%	32.0%	29.5%	27.2%	24.4%	27	75.2	98.9	.280

- Good locations across the arsenal (40.5% zone%) lead to 80th percentile chase rates and 83rd percentile in-zone whiff rates.
- Creates a lot of weak contact (75.2 Avg EV), especially vs. RHBs, where his hard hit rate (25.3%) is 10% below league average (35.3%).
- The weak contact creates a BAA of .132 (4th-lowest in the league), a BABIP of.154 (lowest in the league), and a team leading 1.54 ERA.

Flight Metrics

Arsenal			Velocity		Flight Characteristics			Pitching Motion			Stuff
Pitch Type	Usage	Pitches Thrown	Avg Velo	Max Velo	IVB	HB	VAA	Extension	Rel Height	Rel Side	Stuff+
4FB	57%	242	92	94	22”	9”	-5.0	5.7	6.2	0.0	115
SL	39%	166	83	86	-1”	-3”	-8.4	5.1	6.2	0.1	109
CH	4%	16	85	87	16”	13”	-6.9	5.6	6.0	0.6	93

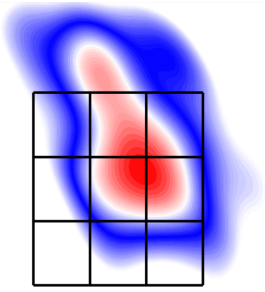

- Average fastball velocity is down 2 mph, and Stuff+ is down 6, most likely due to the amount of innings thrown over time.
- Relying more on offspeed in the Cape League and Stuff+ increased 109 → 113 during the time period.

Overall Effectiveness

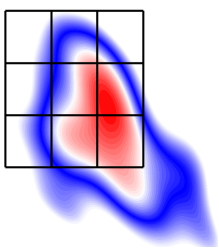

Arsenal	Usage		Locations		Swing and Miss			Ball in Play					
Pitch Type	Pitches Thrown	Usage	Strike %	Heart %	Whiff %	CSW %	ZWhiff %	BIP	GB %	BABIP	ICR	wOBA	Avg EV
4FB	242	57%	59%	21%	21%	27%	13%	35	9%	0.226	29%	0.360	86
SL	166	39%	68%	22%	46%	42%	22%	19	26%	0.438	37%	0.334	89
CH	16	4%	50%	0%	14%	12%	0%	3	67%	0.000	33%	0.000	84
Overall	428	100%	62%	21%	31%	32%	17%	57	18%	0.280	32%	0.339	87

- 4FB is performing better in the summer by generating more whiffs, especially from IZW% (13% → 24%).
- Success in the CCBL is coming from generating more weak contact across all pitches from GBs (GB% 18% → 37%).
- Locating pitches better on the corners of the zone is also contributing to an 89th percentile strikeout rate (34.1%)

Brady St. Pierre

MLB Player Comparison

- St. Pierre's arsenal is most similar to Chase Burns. They both feature a 4FB with high IVB, a secondary gyro SL, and a rarely used CH for LHBs.
- Both have a high arm slot to contribute to the fastball ride.
- Burns also elevates his 4FB to get whiffs with the SL tunneling low and away.
- The main difference in arsenal comes from Burns throwing harder velocities for all pitches (98 vs. 92 avg velo).

- Burns finds success with whiffs like St. Pierre. Burns uses high velocity as his main tool, while St. Pierre relies more on stuff and location.
- Burns and St. Pierre have around a 25th percentile GB%, but St. Pierre does a better job of limiting hard hits (89th percentile vs. 59th percentile).
- Both pitchers excel in strikeout rates (around 90th percentile) by getting whiffs up in the zone and great chase rates.

- Overall, St. Pierre and Burns are most similar in their arsenals because they throw a 4FB, a gyro SL, and a CH. They both feature a high arm slot and share similar pitch-location strategies. They both have strikeout, chase, and whiff rates around the 90th percentile, which have led to their success in their respective leagues.
