- Despite below league-average exit velocity numbers, Miller handles velocity well, posting a .463 OBP and .446 xwOBA against fastballs thus far.
- Miller struggles against breaking balls. He puts it in play (92% z-contact and 16% whiff), but lacks quality hits shown by a 0% hard hit rate, 67% GB%, and a .143 BA.
- Has a patient approach, shown by a 21.1% chase rate across pitch types (83rd percentile), which has led to a team-leading 12 walks and 7 HBPs.

Swing Decisions

NAME	O-SWING%	Z-SWING%	SWING%	O-CONTACT%	Z-CONTACT%	CONTACT%	IN-PLAY%	P PER PA	ZONE%	F-STRIKE%	SWSTR%	CSTR%	CSW%
C. Miller	20.0%	60.6%	39.0%	58.6%	84.4%	77.4%	32.1%	4.32	46.7%	48.5%	8.8%	16.5%	25.4%
Lg. Avg.	*24.7%*	*65.7%*	*43.0%*	*58.1%*	*84.6%*	*76.3%*	*40.4%*	*3.84*	*44.7%*	*57.8%*	*10.3%*	*17.7%*	*28.0%*

- Miller swings less often overall (39.0%), due to chasing fewer pitches out of the zone (20.0% O-Swing%). He's also seeing more pitches per PA (4.32 vs. the league average of 3.84), which supports his patient approach, creating a 16% walk rate (85th percentile).
- Miller is also swinging less overall, and even 5% less than the league average at pitches in the zone. This is contributing to a 30.6 K% (32nd percentile).
- The In-Play% is 8% lower than the league average, further showing that Miller takes pitches, going deep into counts and having higher strikeout and walk rates.

Hard	126	63%	13%	85%	90%	40%	30%	35%	83	2.7	2.2
Breaking	104	52%	19%	90%	100%	33%	42%	42%	87	2.9	2.8

vs RHP

Pitch Group	Pitches	ZSwing %	Chase %	Contact %	ZContact %	GB %	ICR	Hit 95+ %	EV50	Run Value	RV/100
Offspeed	160	69%	22%	72%	74%	21%	38%	41%	92	1.1	0.7
Hard	372	63%	19%	90%	98%	19%	49%	49%	95	14.7	4.0
Breaking	161	56%	10%	94%	92%	26%	44%	37%	91	4.8	3.0

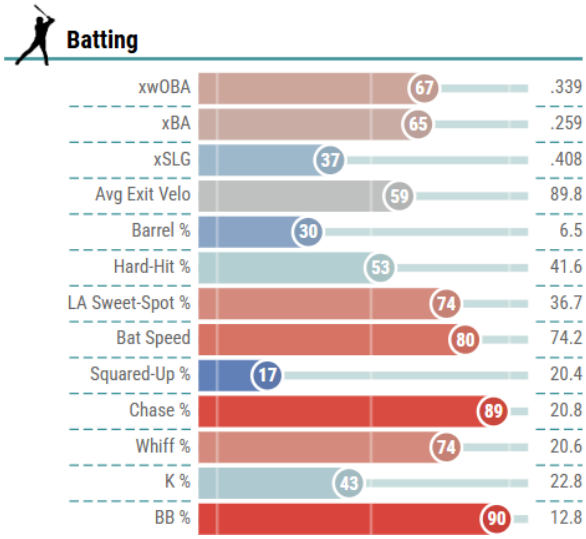

- More success vs. breaking balls during college season with a lower GB% (33% vs 66%) and harder hits (EV50 87 mph vs. 83.6 mph). Despite still making below-average in-zone swing decisions, better contact led to a 76th percentile RV/100 in college (2.8).
- Hitting the fastball has carried his performance in the CCBL so far, but carried his college performance even more, especially Vs. RHP: Had a 98% z-contact rate (96th percentile) and 4.0 RV/100 (93rd percentile).
- During college, he pulled the ball more (37% vs 31% pull%) and hit the ball in the air more (24% GB% vs 48% GB%), creating harder-hit balls (EV50: 93 mph vs 84 mph).
- Similar patient hitting approaches in both seasons, with below-average in-zone swing rates and above-average chase rates. Taking more pitches per at bat (4.2 CCBL and 4.7 college) leads to higher walk rates and strikeout rates across both seasons.

Hitter Spray Chart

Caden Miller

MLB Player Comparison

- Miller's hitting style is most similar to Nathaniel Lowe's 2023 season with the Texas Rangers. Both 1st baseman have a patient approach, hunt for fastballs, have decent power, and make great swing decisions.
- Both hitters share a patient approach: Miller's 21% chase rate (85th percentile) closely mirrors Lowe's 20.8% chase rate in 2023 (89th percentile). Both hitters avoid expanding the zone and giving away strikes.
- Their walk rate follows from that approach: Miller's 16% walk rate (85th percentile) and Lowe's 12.8% BB% (90th percentile) both rank among the best in their leagues.
- Both hitters carry a contact-oriented profile over a power-hitting one. Lowe's 2023 average EV was 89.8 mph with a 6.5% Barrel rate. Miller's average EV was 83% in the 64th percentile, showing they both have average power.

- Lowe and Miller have the best success against the fastball. Lowe had an 8 RV/100 against the fastball, and Miller had 4.0 RV/100 (93rd percentile), showing their bat-to-ball skills against velocity.
- Both players have above-average GB% and below-average pull rates, both contributing to their modest power approach.
